Utah's Labor Force — 1989

Utah ended 1989 with one of its best economic years of the decade. After struggling through several downturns, Utah's economy closed the 80s with a bang. At 4.6 percent, the State's unemployment rate registered down in the "full employment" range. In addition, average annual nonfarm job growth registered 4.7 percent—an expansion rate topped only by the recovery year of 1984 (6 percent growth). In fact, Utah was one of the top ten states in the nation in terms of job growth. Utah's economy averaged 691,000 jobs during 1989. Business expansion during the year generated 31,000 new jobs for the State's economy.

Employment Versus Unemployment

On average 37,000 Utahns were unemployed during 1989—about the same number as in 1988. However, 30,000 more Utahns were employed in 1989 than in 1988—which resulted in a lower jobless percentage. Utah followed the recent trend by ending the year below the national average. In 1989, Utah's unemployment rate averaged 4.6 percent— seven-tenths of a point lower than the nation average of 5.3 percent.

Industry by Industry

Where did the new jobs come from? In 1989, the service sector once again proved to be the growth industry of the 80s. Services added more than 11,000 new jobs. Strong growth came in business services (particularly computer services), medical/health services, and most other service areas. Not only did this sector add the highest number of new jobs of any major industrial sector, but it also registered the highest percentage growth rate in comparison with 1988—over 7 percent.

Following the pattern of recent years, trade fell in close behind services in terms of job creation. With growth rates of 8 and 6 percent respectively wholesale and retail trade combined forces to generate 9,900 net new jobs.

When it came to manufacturing jobs, Utah bucked the national trend. The U.S. actually lost manufacturing employment during 1989. On the other hand, Utah added 4,100 new manufacturing positions for a nice, healthy 1988-1989 growth rate of 4 percent. Utah ranked fifth in growth in manufacturing jobs. Production of both durable and nondurable goods generated strong increases for this sector.

Moderate expansion was the rule for construction (up 3.6 percent) and transportation/communications/utilities (up 3.8 percent). The completion of the Intermountain Power Project coupled with persistent (but decreasing) outmigration and an economic downturn put the industry in a declining mode for much of the last part of the 80s. However, in 1989, the trend turned around, and construction actually started creating jobs instead of losing them. Between 1988 and 1989, construction employment increased by 900 positions. Transportation/communications and public utilities contributed 1,500 new jobs—mostly in the transportation sector.

Slower Than Average

Government generated a growth rate of only 2.5 percent. However, even this modest growth rate meant 3,600 new Utah jobs. Federal expansion proved minimal (only 1.7 percent). Expansion in state and local positions

Chart 1.
Utah Unemployment Rates 1980-1989

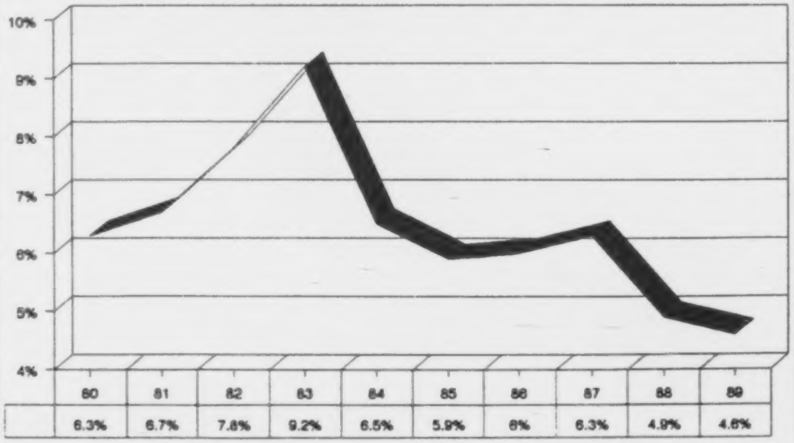

Chart 2.
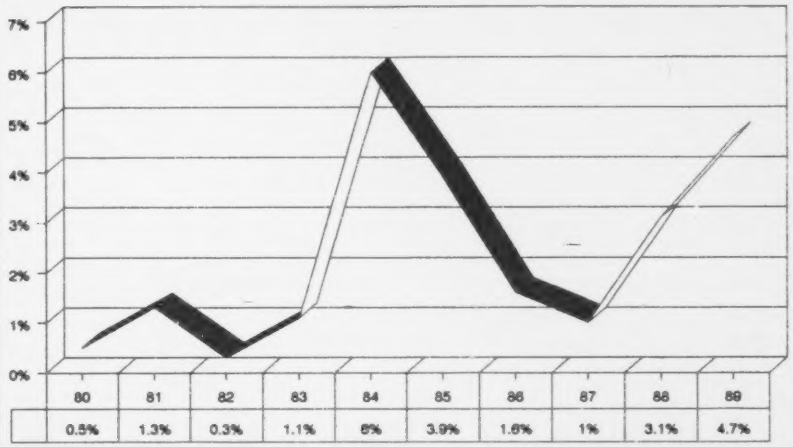
Utah Year-Over Percent Change in Nonfarm Jobs



proved better (4 and 2 percent respectively) – most of these jobs occurred in education.

Not All Rosy

Two industries actually lost jobs. Mining employment was down less than a percentage point. However, although mining encountered losses in the early part of 1989, by the latter part of the year, it had started creating non-coal mining jobs again. Finance/insurance/real estate appeared as the other major industry loser. As with mining, employment loss registered less than 50 positions.

Major Employers

Who were Utah's major employers? As of September 1989, Hill Air Force Base employed the largest number of Utahns. Other top employers included universities, school districts, two major defense contractors, and a food store chain. Government entities show up frequently in the "top 100" list as do major retail chains, utilities, health care services, and "high tech" companies.

How Did Utah's Labor Force Look?

What did Utah's labor force look like in 1989? More than 71 percent of Utah's civilian, noninstitutionalized population, over the age of 16 were labor force participants during the year. Economists call that 71 percent figure a participation rate. Utah's participation rate ranks significantly higher than the national average (66 percent). Both Utah women (61 percent) and Utah men (81 percent) participate in the labor market at a higher rate than their national counterparts (57 and 76 percent respectively).

Who Works?

Not surprisingly, individuals between the ages of 20 and 54 percent are most likely to be in the State's work force. The participation rate for this group averages over 83 percent. Men are most likely to work between the ages of 35 and 44 (97 percent). Utah women between the ages of 20 and 24 participated in employment at the highest rate – 77 percent.

Just why are Utahns more likely to work? Is it just Utah's much touted work ethic? First, Utah has a relatively young population, *and*, young people are more likely to work – particularly given recent trends toward early retire-

Chart 3.
Utah 1988-1989 Percent Change in Nonfarm Jobs

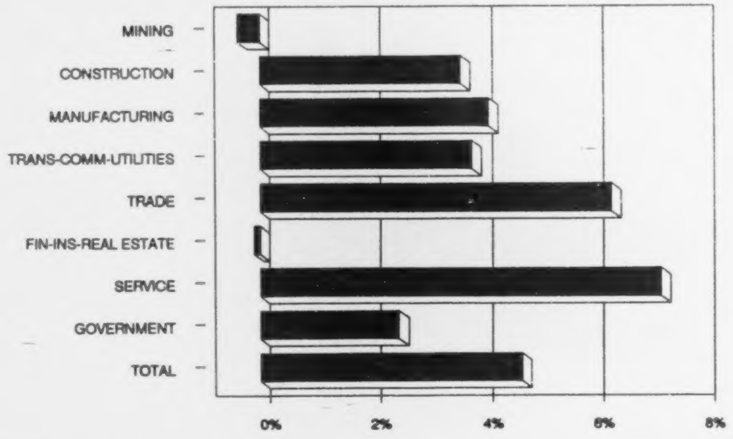


Chart 4.
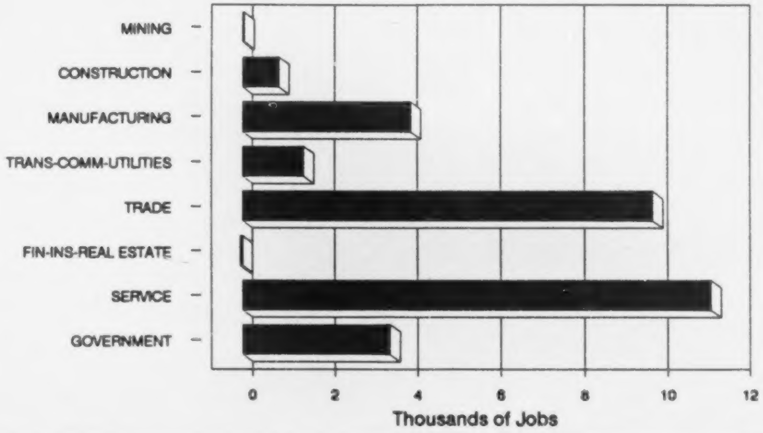
Utah Growth in Nonfarm Jobs 1989-1990



ment. Plus, Utah's young people (16-19 years old) are much more likely to work than young people nationally. In Utah, almost 70 percent of 16-19 year-olds work or are looking for work compared to the U.S. average of 56 percent. In addition, Utah's relatively large families and slightly lower than average wages may require more families to involve more than one wage earner. These factors coupled with Utahns' relatively higher education levels and "work ethic" seem to account for most of the difference between Utah and national participation rates.

The Marriage Factor

Single Utahns are most likely to work – almost 79 percent. However, single (never married) men (81 percent) are less likely to work than married men (82 percent) while married women (59 percent) are less likely to work than single women (76 percent). Those in the "other marital status" (separated, divorced, widowed) are least likely of all groups to be in the labor force. Because of the larger number of older people in this group, their participation rate averaged 61 percent.

Where Do Utahns Work?

Roughly 98 percent of experienced Utah workers are employed in nonagricultural industries. More than a fifth of these individuals work in service industries. Slightly less work in trade. Manufacturing employs 15 percent of experienced workers while transportation/communication/utilities, construction, and finance/insurance/real estate employ about 5 percent each. Experienced government workers make up almost another fifth of the work force – slightly more than the national average. Utah's higher percentage of government workers stems from our large school-age population which requires a large number of teachers. Not quite a tenth of the State's labor force is self-employed.

Finally. . .

Utah ended the year with a bang. Unemployment hit the lowest rate of the decade. Job creation was at a near decade high. However several industries and areas suffered – notably rural Utah and the finance and mining industries.

Lecia Parks Langston, Chief Economist

Rate	4.5	4.5	5.3	5.1	5.4	4.6	4.5	4.6	4.5	4.5	4.4	4.3

Note: Detail may not add to totals because of independent rounding. A conceptual difference exists between "Civilian Labor Force and Components" and "Employees on Nonagricultural Payrolls." The former is an estimate of the number of employed and unemployed persons by place of residence (employed persons include those with a job but not at work), whereas the latter is a payroll count of the number of jobs at the place of employment as reported by the employing establishment.

Note: A conceptual difference exists between "Civilian Labor Force and Components" and "Employees on Nonagricultural Payrolls." The former is an estimate of the number of employed and unemployed persons by place of residence (employed persons include those with a job but not at work), whereas the latter is a payroll count of the number of jobs at the place of employment as reported by the employing establishment.

1/ Salt Lake City includes Downtown, East Side, Avenues, University, East Bench, Sugar House, South State and various other areas, and therefore, will not add to County total.
Community boundaries were modified in 1988. Historical data for existing communities were revised to reflect these boundary changes.
For newly established communities (Taylorsville, Airport, and South Salt Lake), only data for 1987 forward are available.

DEFINITIONS

Nonagricultural Employment: A calendar year average of the number of employees reported to the Utah Department of Employment Security by employers subject to Utah's unemployment insurance laws, federal agencies in Utah subject to the Unemployment Compensation for Federal Employees (UCFE) program and other Utah employers not included under unemployment insurance.

As a result of multiple job holding and payroll turnover, some workers are reported by more than one employer. Therefore, the count is not of persons, but of jobs.

Nonagricultural employment includes most corporation officials, executives, supervisory personnel and clerical workers. It excludes proprietors, self-employed, unpaid family workers who neither work nor received wages as a result of strikes or work stoppages, temporary layoffs or unpaid sick or vacation leave.

Reporting Units: Any firm, organization, division or establishment for which data are separately reported to the Utah Department of Employment Security, i.e. individual physical facilities such as stores, plants, offices, and other worksites.

Total Wages: All yearly remuneration paid to nonagricultural workers, including gross wages, commission, bonuses, cash value of meals, lodging, and other gratuities when furnished as payment for the job. Reimbursement for travel or other business expenditures are not included.

Average Monthly Wage: "Total Wages" divided by the number of employees on nonagricultural payrolls.

New Hires: Those persons hired during the year who on their own initiative sought employment. Recalls or call backs, initiated by the employer are not included. Includes workers hired on a full-time or part-time basis.

New Hires Rate: Represents the number of new hires made during the quarter per each one hundred employees.

Utah's Labor Force—1990

Although the nation slipped into the recessionary abyss in 1990, Utah ended the first year of the decade in a healthy economic state. The unemployment rate dropped from 4.6 percent to 4.3 percent—the lowest figure since 1979. In addition, nonfarm job growth registered 4.7 percent—equal to Utah's 1989 rate and not topped since 1984. In fact, Utah ended the year as one of the top ten job producing states in the nation.

Unemployment Drops

On average, 34,000 Utahns were unemployed during 1990—3,000 fewer than in 1989. In addition, the employed portion of the labor force also increased by 6,000 individuals. Utah followed its typical behavior by ending the year with an unemployment rate 1.2 percentage points below the national average.

Industry by Industry

Utah created 32,400 net new jobs between 1989 and 1990. Approximately 13,500 of these positions (more than 40 percent) were the result of growth in the services industry. If 1990 is any indication, services will be the growth industry of the 90s as it was in the 80s. Not only did this sector add the highest number of new jobs to the Utah economy of any major sector, but it also registered the highest 1990 percentage growth rate—over 8 percent.

Following the pattern of recent years, trade fell second in line behind services in terms of numbers of new jobs. However, all of the 6,000 job increase was generated by retail trade; wholesale trade lost jobs. Despite this loss, the trade industry managed a moderate 3.6 percent 1990 gain.

Bouncing Back

While not creating as many new jobs as trade, mining and construction showed much stronger expansion rates—5.8

and 7.6 percent respectively. Mining added 500 new jobs while construction added 2,000 new positions. After several years of declining employment, one of the strongest housing markets in the U.S. added to strong nonresidential building to push construction back to expansion in 1990.

Bucking the National Trend

When it came to manufacturing jobs, Utah continued its "buck the national trend" performance. While the U.S. lost manufacturing jobs, Utah produced 2,400 net new positions for a 3.9 percent increase. Both durable and nondurable goods production shared in the gain.

On the Moderate Side

Transportation/communications/utilities (3.5 percent) and government (2.9 percent) also experienced moderate growth. While state and local entities saw strong employment expansion, cuts in defense spending meant losses of federal jobs. However, even with these reductions, government produced 4,200 new jobs. The transportation/communications/utilities sector contributed 1,400 additional positions.

Source: Utah Department of Employment Security, Labor Market Information Services.

Bringing Up the End

Finance/insurance/real estate grew at the slowest rate during 1990. This sector added 800 positions for a 2.3 percent growth rate. Increases resulted primarily from expansion in nondepository (or "nonbanking") institutions.

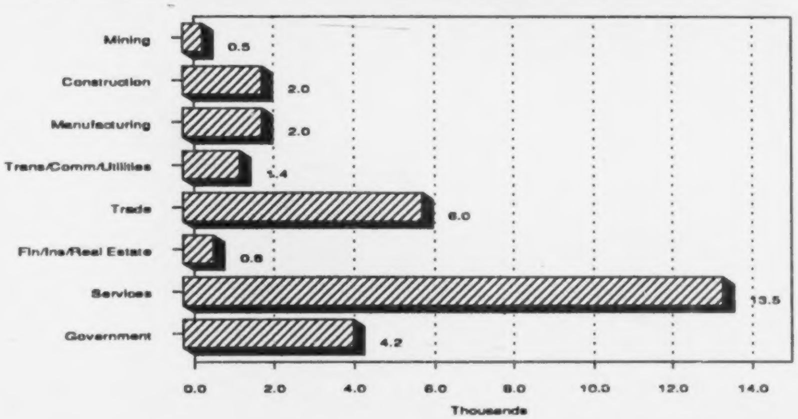
Major Employers

Who were Utah's Major Employers? At the end of 1990, Hill Air Force Base employed the largest number of Utahns—despite defense cutbacks. Other top employers included universities, school districts, government entities, two major defense contractors, and a food store chain. Major retail chains, utilities, health care services, large manufacturing firms, and banks are often found in the top 100 companies. For a full list, consult the table of Utah employers which immediately follows this narrative.

What Did Utah's Labor Force Look Like?

What was the composition of Utah's labor force in 1990? Roughly 71 percent of the State's civilian, noninstitu-

Chart 3.
Utah Job Growth by Industry



Source: Utah Department of Employment Security, Labor Market Information Services.

tionalized population—over the age of 16—participated in the labor force during the year. This "participation rate" ranks significantly higher than the national average of 66 percent. Both Utah women (61 percent) and Utah men (81 percent) take part in the labor market at a higher rate than their national counterparts (58 and 76 percent respectively).

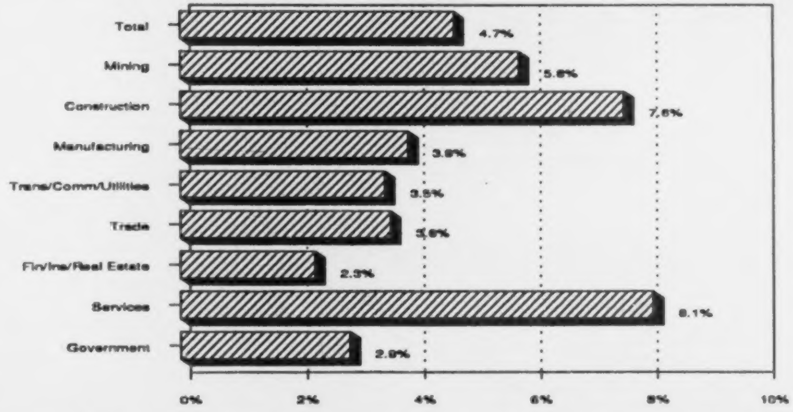
Who works?

Not surprisingly, individuals between the ages of 20 and 54 are most likely to be in the State's work force. The participation rate for this group averages about 80 percent. Men between the ages of 25 and 34 were the most likely to work—97 percent were labor force members. However, women between the ages of 20 and 24 participated in the labor force at the highest rate—76 percent.

More Likely to Work

Just why are Utahns more likely to work than their national counterparts? Is it just Utah's much touted work ethic? Utah has a relatively young population, and young people are most likely to work—particularly given recent trends toward early retirement. Plus, Utah's young people are much more likely to work than U.S. teenagers in general. In Utah, 68 percent of 16-19 year olds are working or looking for work compared with 54 percent

Chart 4.
Utah Nonfarm Job Growth Rate by Industry



Source: Utah Department of Employment Security, Labor Market Information Services.

nationally. In addition, Utah's relatively large families and lower than average wages may require families to embrace more than one wage earner. These factors coupled with Utahns' relatively higher education levels and "work ethic" account for most of the difference between Utah and U.S. participation rates.

The Marriage Factor

Single (never married) Utahns are most likely to work—77 percent participate in the labor force. However, never married men (79 percent) are less likely to work than married men (82 percent), while single women (75 percent) are more likely to work than married females (60 percent). Those in the "other marital status" group (separated, divorced, widowed) are least likely (of both sexes) to be labor force members—50 percent of women and 73 percent of men. Of course, this "other" group includes a larger number of older people and participation rates include those over 65 years of age.

Where Do They Work?

Roughly 97 percent of experienced Utah workers are employed in nonagricultural industries. Trade, services, and government each employ about one-fifth of the experienced labor force. Government employs a noticeably larger share of individuals in Utah than it does in the nation generally. This stems from the State's large school age population which requires a large number of jobs in the educational sector. Manufacturing employs another 16 percent of experienced Utah workers. Smaller sectors include mining (less than 1 percent), construction (4 percent), transportation/communications/utilities (7 percent), and finance/insurance/real estate (5 percent). Agriculture accounts for only 3 percent of experienced workers, while about 8 percent of Utahns are self-employed.

A Pleasant Way to Start a Decade

All in all, Utah started the decade with a bang. The State ignored the national recession. Unemployment dropped to an eleven year low and job growth held firm with a strong 4.7 percent increase. Nevertheless, some industries experienced declines and rural Utah still faced a number of economic difficulties.

Lecia Parks Langston
Chief Economist

1/ Salt Lake City includes Downtown, East Side, Avenues, University, East Bench, Sugar House, South State and various other areas, and therefore, will not add to County total.

Community boundaries were modified in 1988. Historical data for existing communities were revised to reflect these boundary changes. Prior to 1987 for newly established communities (Taylorsville, Airport, and South Salt Lake), data are not available.

DEFINITIONS

Nonagricultural Employment: A calendar year average of the number of employees reported to the Utah Department of Employment Security by employers subjects to Utah's unemployment insurance laws, federal agencies in Utah subject to the Unemployment Compensation for Federal Employees (UCFE) program and other Utah employers not included under unemployment insurance.

As a result of multiple job holding and payroll turnover, some workers are reported by more than one employer. Therefore, the count is not of persons, but of jobs.

Nonagricultural employment includes most corporation officials, executives, supervisory personnel and clerical workers. It excludes proprietors, self-employed, unpaid family workers who neither work nor received wages as a result of strikes or work stoppages, temporary layoffs or unpaid sick or vacation leave.

Reporting Units: Any firm, organization, division or establishment for which data are separately reported to the Utah Department of Employment Security, i.e. individual physical facilities such as stores, plants, offices, and other worksites.

Total Wages: All yearly remuneration paid to nonagricultural workers, including gross wages, commission, bonuses, cash value of meals, lodging, and other gratuities when furnished as payment for the job. Reimbursement for travel or other business expenditures are not included.

Average Monthly Wage: "Total Wages" divided by the number of employees on nonagricultural payrolls.

New Hires: Those persons hired during the year who on their own initiative sought employment. Recalls or call backs, initiated by the employer are not included. Includes workers hired on a full-time or part-time basis.

New Hires Rate: Represents the average monthly number of new hires made per one hundred employees.

Utah's Labor Force—1991

Despite a national economic downturn, Utah avoided a recession in 1991. Nevertheless, the State was buffeted by the U.S. recessionary winds and checked by cuts in defense spending. Utah's unemployment rate rose to 4.9 percent in 1991—0.6 percentage points higher than in 1990. Nonfarm job growth slowed to 3 percent—down from almost 5 percent in 1990. Still, Utah ranks in the top ten states in terms of job growth.

Unemployment Rises

An average of 39,000 Utahns were out of work during the 12 months of 1991—5,000 more than in 1990. Utah generally sports an unemployment rate lower than the national average, and in 1991, the trend once again held true. The national recession pushed the U.S. jobless rate to 6.7 percent—almost 2 points higher than the Utah figure.

In 1991, Utah created 21,600 new nonagricultural jobs, noticeably fewer than the 32,300 created in 1990. Most of Utah's industrial sectors fare well in 1990. Only manufacturing actually lost jobs while mining and transportation/communications/utilities remained static.

A Surprise in Construction

Construction proved the "surprise" industry of 1991. Generally, during economic hard times, construction is one of the first industries impacted. However, despite the national recession, construction employment in Utah increased a whopping 13 percent in 1991—an addition of 3,700 new jobs. Strong growth in residential building kept this sector pumping out jobs.

Finance/insurance/real estate also made a strong showing in 1991. Jobs in this industry grew a robust 5 percent for an addition of 1,700 new positions. The addition of several financial "service centers" to the Utah pool of employers was responsible for the healthy improvement in this industry.

The service industry lost its spot as the fastest growing Utah industry in 1991. However, this sector continues to provide the highest number of new Utah jobs. Between 1990 and 1991, the service industry added 7,600 new Utah jobs—more than one-third of the State total—for an expansion rate of 4 percent. Fast growing categories within this industry included computer services (which includes software) and medical services.

Trade also managed a growth rate of nearly 4 percent (6,400 jobs). The addition of several national retail chains to the Utah market helped keep this industry going strong.

The public sector was hampered by cuts in federal defense employment in 1991. Nevertheless, government added 3,400 new jobs. Strong state and local government employment generation kept government in this moderate stance.

Chart 2.

Source: Utah Department of Employment Security, Labor Market Information.

Both mining and transportation/communications/utilities industry employment remained basically flat. Coal mining closures kept mining from expanding, while layoffs in utilities and communications kept transportation/communications/utilities from growing.

A Double Blow

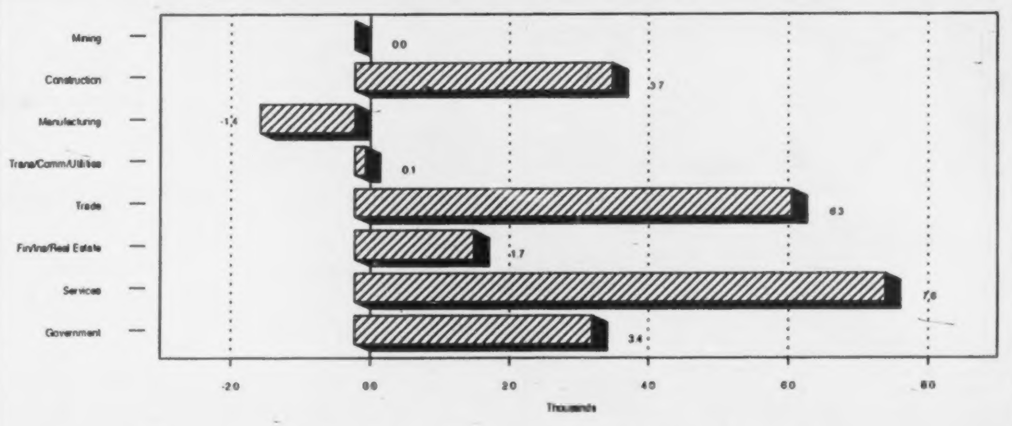
The loss of 1,400 manufacturing jobs in 1991 can be attributed to both cuts in defense contracts and recessionary problems. Manufacturing employment dropped slightly more than 1 percent in 1991. Transportation equipment and electrical manufacturing were hit hardest by the aforementioned pressures.

While Utah's economic growth slowed in 1991, the State still managed one of the best economic records in the nation. The fact that Utah avoided a recession in the wake of a national recession is a tribute to Utah's economic health. As the nation recovers, Utah should see a brighter labor force picture by the end of 1992.

Major Employers

Who were Utah's Major Employers? At the end of 1991, with roughly 14,000 employees, the University of Utah (including the hospital) moved to the top employer spot. Other top employers included other major universities, school districts, government entities, a major defense contractor, a food store chain and an airline. Hill Air Force Base—

Chart 3.
Utah Job Growth by Industry—1991



Source: Utah Department of Employment Security, Labor Market Information.

formerly Utah's top employer—moved to the number three spot due to defense cuts. Major retail chains, utilities, health care services, large manufacturing firms, and banks are often found in the top 100 companies. For a full list, consult the table of Utah employers which immediately follows this narrative.

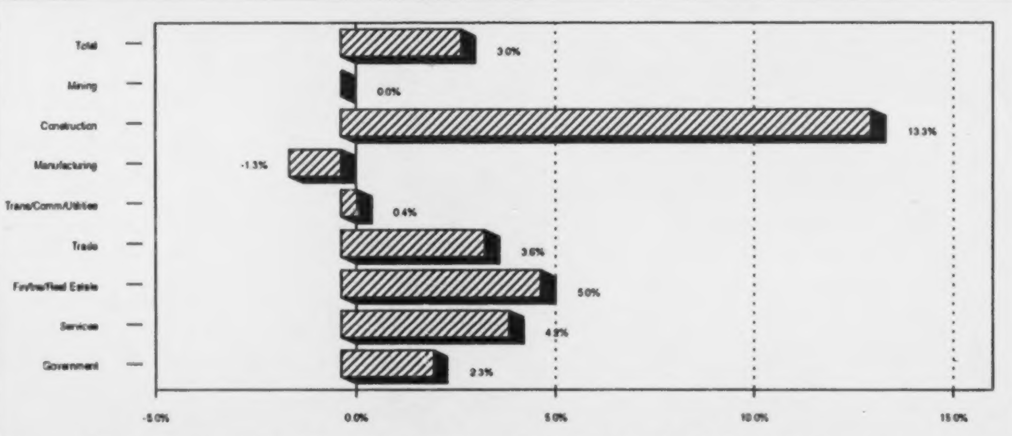
What Did Utah's Labor Force Look Like?

What was the composition of Utah's labor force in 1990? Roughly 71 percent of the State's civilian, noninstitutionalized population—over the age of 16—participated in the labor force during the year. This "participation rate" ranks significantly higher than the national average of 66 percent. Both Utah women (61 percent) and Utah men (81 percent) take part in the labor market more than their national counterparts (57 and 76 percent respectively).

Who works?

Not surprisingly, individuals between the ages of 20 and 54 were most likely to be in the State's work force. The participation rate for this group averaged about 84 percent. Men between the ages of 25 and 34 were the most likely to work—96 percent were labor force members. However, women between the ages of 20 - 24 participated in the

Chart 4.
Utah Nonfarm Job Growth Rate by Industry-1991



Source: Utah Department of Employment Security, Labor Market Information.

labor force at the highest rate—78 percent.

More Likely to Work

Just why are Utahns more likely to work than their national counterparts? Is it just Utah's much touted work ethic? Utah has a relatively young population, and young people are most likely to work—particularly given recent trends toward early retirement. Plus, Utah's young people are much more likely to work than U.S. teenagers in general. In Utah, 68 percent of 16-19 year olds are working or looking for work compared with 52 percent nationally. In addition, Utah's relatively large families and lower than average wages may require families to embrace more than one wage earner. These factors coupled with Utahns' relatively higher education levels and "work ethic" account for most of the difference between Utah and U.S. participation rates.

The Marriage Factor

Single (never married) Utahns are most likely to work—77 percent participate in the labor force. However, never married men (79 percent) are less likely to work than married men (83 percent), while single women (74 percent) are more likely to work than married females (60 percent). Those in the "other marital status" group (separated, divorced, widowed) are least likely (of both sexes) to be labor force members—52 percent of women and 74 percent of men. Of course, this "other" group includes a larger number of older people—participation rates include those over 65 years of age.

Where Do They Work?

Roughly 96 percent of experienced Utah workers are employed in nonagricultural industries. Trade, services, and government each employ about one-fifth of the experienced labor force. Government employs a noticeably larger share of individuals in Utah than it does in the nation generally. This stems from the State's large school age population which requires a large number of jobs in the educational sector. Manufacturing employs another 17 percent of experienced Utah workers. Smaller sectors include mining (less than 1 percent), construction (5 percent), transportation/communications/utilities (6 percent), and finance/insurance/real estate (6 percent). Agriculture accounts for only 4 percent of experienced workers, while about 10 percent of Utahns are self-employed.

NOTE: A conceptual difference exists between *Civilian Labor Force* and *Employees on Nonagricultural Payrolls*. The former is an estimate of the number of employed and unemployed persons by place of residence (employed persons include those with a job but not at work), whereas the latter is a payroll count of the number of jobs at the place of employment as reported by the employing establishment.

1/ Salt Lake City includes Downtown, East Side, Avenues, University, East Bench, Sugar House, South State and various other areas, and therefore, will not add to County total.
Community boundaries were modified in 1988. Historical data for existing communities were revised to reflect these boundary changes.
Prior to 1987 for newly established communities (Taylorsville, Airport, and South Salt Lake), data are not available.
2/ Boundaries were modified in 1991 for Rose Park and Airport.

DEFINITIONS

Nonagricultural Employment: A calendar year average of the number of employees reported to the Utah Department of Employment Security by employers subjects to Utah's unemployment insurançe laws, federal agencies in Utah subject to the Unemployment Compensation for Federal Employees (UCFE) program and other Utah employers not included under unemployment insurance.

As a result of multiple job holding and payroll turnover, some workers are reported by more than one employer. Therefore, the count is not of persons, but of jobs.

Nonagricultural employment includes most corporation officials, executives, supervisory personnel and clerical workers. It excludes proprietors, self-employed, unpaid family workers who neither work nor received wages as a result of strikes or work stoppages, temporary layoffs or unpaid sick or vacation leave.

Reporting Units: Any firm, organization, division or establishment for which data are separately reported to the Utah Department of Employment Security, i.e. individual physical facilities such as stores, plants, offices, and other worksites.

Total Wages: All yearly remuneration paid to nonagricultural workers, including gross wages, commission, bonuses, cash value of meals, lodging, and other gratuities when furnished as payment for the job. Reimbursement for travel or other business expenditures are not included.

Average Monthly Wage: "Total Wages" divided by the number of employees on nonagricultural payrolls.

New Hires: Those persons hired during the year who on their own initiative sought employment. Recalls or call backs, initiated by the employer are not included. Includes workers hired on a full-time or part-time basis.

New Hires Rate: Represents the average monthly number of new hires made per one hundred employees.
